1 Scraping Interests

I am interesting in scraping data from online auction resell apps (eBay, Poshmark, Mercari, etc.). This is purely self serving as I want to gather and analyze data on price determinants in a resale market for my personal side hustle.

2 Code Answers

1. `class(df1) = data.frame` `class(df) = SparkDataFrame`
2. When running head command on df1, the response is: Error in (function (classes, fdef, mtable) : unable to find an inherited method for function 'select' for signature "data.frame", "NULL" This is probably due to the command being specific to an R data frame and not a SparkR data frame
3. When running the filter command for df1: Error in (function (classes, fdef, mtable) : unable to find an inherited method for function 'filter' for signature "data.frame", "logical" Again, this is because R commands are very specific to the structure of the object in question. df1 is not a data.frame =, these commands do not know how to run with how it is structured.
